\*Mathematics Education; Partnerships in Education; \*Science  
Education; \*Teacher Education

ABSTRACT

The profiles in this report present a snapshot of recent reform efforts in mathematics and science teacher education programs at institutions participating in Project SUSTAIN (Schools and Universities Statewide Teaching Approaches to Inquiry) collaboratives. Data were collected during the year 2000, and respondents were asked to describe developments over the past 3-5 years. Some of the initiatives were supported by SUSTAIN funding, and some were supported by other state, federal, and/or private funding. Because respondents could provide only information accessible to them, this report necessarily presents a conservative picture of the wide range of efforts underway throughout the state of Ohio to improve the preparation of mathematics and science teachers for the 21st century. ## *Foreword*

The profiles in this report present a snapshot of recent reform efforts in mathematics and science teacher education programs at institutions participating in *Project SUSTAIN* collaboratives. Data were collected during the year 2000, and respondents were asked to describe developments over the past 3-5 years. Some of the initiatives were supported by *SUSTAIN* funding, and some were supported by other state, federal, and/or private funding. Because respondents could provide only information accessible to them, this report necessarily presents a conservative picture of the wide range of efforts underway throughout the state of Ohio to improve the preparation of mathematics and science teachers for the 21st century.

Our most sincere appreciation goes to the primary contact persons listed on the back of each profile, who provided most of the information recorded herein. Any errors are due to our interpretation, and not to the data they provided.

*Sigrid Wagner*  
*Steven P. Meiring*  
*Kelly M. Costner*

### What Is Project SUSTAIN?

*Project SUSTAIN* (Schools and Universities Statewide Teaching Approaches to INquiry) is a multi-year effort funded by the Ohio Board of Regents and the Ohio Department of Education to foster collaboration within and among colleges and universities engaged in mathematics and science teacher education. The purpose of *SUSTAIN* is to expand and institutionalize improvements in the preparation and professional development of K–12 mathematics and science teachers to meet the challenges of the 21st century.

### Goals of Project SUSTAIN

- Enhance student achievement in mathematics and science, particularly in urban and other at-risk districts, through college and university partnerships with schools;
- Improve preservice teacher preparation programs in mathematics and science by:
  - a. Implementing standards-based approaches to teaching mathematics and science content courses;
  - b. Improving links with in-service professional development; and
  - c. Increasing the integration of content and pedagogy in teacher preparation;
- Strengthen coordination and communication among college faculties (Education and Arts & Sciences) to improve the teaching and learning of mathematics and science for preservice teacher education programs;
- Establish ongoing collaboration among institutions of higher education, school districts, and professional development centers with a focus on teacher preparation and professionalization.

### Progress in Stages

- Phase 1 involved eight institutions in seven collaboratives that extended Project *Discovery* institutes to state-assisted universities moving to institutionalize standards-based, sustained professional development models for mathematics, physics, and life sciences.
- Phase 2 expanded to 12 state-assisted universities in redesign of preservice teacher education programs and in-service courses through intra-university collaborations between Arts & Sciences and Education.
- Phase 3 will encompass all 13 state-assisted universities, through inter-university collaborations with selected private and two-year colleges, in partnership with at-risk school districts, to expand and coordinate inquiry- and standards-based teacher preparation throughout a region.

### Project Criteria

Projects funded must have potential for improving achievement and disposition for all students, especially those traditionally underrepresented in mathematics and science. Projects must demonstrate measurable and institutionalized improvements in preservice teacher education programs, such as:

- Developing new courses, programs, or models for teacher preparation; and/or
- Improving existing courses and programs by incorporating standards-based features of *Discovery*.

Desirable outcomes include enhancing the professional development of college and university faculty, promoting linkages between preservice and in-service professional development programs, or exchange of services between school and university campuses.

### System Alignment

Improving the preparation of teachers in mathematics and science provides the impetus for realigning teacher education programs with national and state standards for content, teaching methods, and clinical field experiences. Content coursework needs to emphasize mathematical reasoning, problem solving, and the processes of scientific investigation. Students need to acquire content knowledge through the same intensive, inquiry experiences that standards-based methods courses recommend for K-12 students. Mentor teachers in clinical field experiences should model standards-based teaching practices.

For such system alignment to occur, coherent, coordinated, and collaborative partnerships must flourish among departments of science and mathematics, schools of education, school districts, and professional development centers. These partnerships must include all universities, community colleges, and private institutions of higher education in Ohio. Commonly shared understandings of inquiry- and standards-based teaching practices must become a reality at all educational levels throughout the state. Equivalent and consistent teacher training is a practical necessity for transfer students, as well as for equity in the quality of teachers who work with K-12 students anywhere in Ohio. Inter-institutional partnerships that enable professional growth for faculty, sharing of standards-based courses and programs, and an inter-linked system of technical support for teacher education are goals that *SUSTAIN* supports.

### *Institution*

- 1,104 undergraduate students
- 74 full-time faculty
- 25 master's students

Central State University, Ohio's only public historically black university, was established in 1887 and offers 40 degree programs across 3 colleges.

### *Mathematics and Science Teacher Education*

- 4 mathematics faculty with 1 having primary responsibility for mathematics education
  - 8 science faculty with 2 having primary responsibility for science education
- Baccalaureate programs have produced 12 (11 African American) mathematics teachers (grades 7-12) and 6 (5 African American) science teachers (grades 7-12) since 1993. Central State awards about 60 percent of the mathematics education and about 33 percent of the science education degrees awarded to African American students at Ohio public universities each year. The number of students and faculty in mathematics and science has remained fairly constant over the past five years.

### *Course Development and Revision*

All education (EDU) courses have been revised, with an emphasis on early (first year) field placement. As a result of support from *SUSTAIN*, many of the general education courses are being enriched with the themes of discovery, inquiry, and learning by doing.

### *Intra-Institutional Collaboration*

- Arts & Sciences and Education faculty reviewed and revised all university programs and courses related to new teacher licensure requirements.
- A Minority Science Improvement Project (MSIP) grant supports infusion of general education courses with technology and provides ongoing support for collaboration.

*SUSTAIN* provides the impetus for continued dialogue and collaboration among Education and Science and Mathematics faculty.

### *Inter-Institutional Collaboration*

- Illinois Institute of Technology
- Morgan State University
- Clark Atlanta University
- Texas Southern University
- Wright State University
- Cedarville University

Interactions with faculty and students at these universities have provided opportunities for mutual exchange of ideas and programs.

### *Institutes and Workshops for K-12 Teachers*

- 1 science workshop for Yellow Springs High School students
- 1 interdisciplinary, mathematics and science hands-on project for Hickory Dale Elementary teachers
- 1 hands-on biology workshop for 144 elementary students from the Xenia Community Schools
- Three-week summer institute for high school students team-taught by Central State faculty and teachers from Dayton City Schools

Central State faculty make numerous presentations to and host programs for students and teachers from area schools. These include special media prepared for AP biology coursework, garden shows for elementary and middle school students, development of a youth garden for Jefferson Montessori Elementary School, and a one-day enrichment program in mathematics and science for Dayton City high school students.

### *Professional Development for Higher Education Faculty*

- Project Kaleidoscope (PKAL) Faculty for the 21<sup>st</sup> Century Network
- Participation Strategies for Successful Classroom Interaction, a science education workshop sponsored by Sinclair Community College and Benjamin Cummings

A fully staffed university office of faculty development is a clearinghouse for numerous internal and external opportunities for faculty development.

### *SUSTAIN Focus at Central State University*

- 1998-99: Participation by Central State faculty in inquiry-based teaching workshops for faculty conducted by the Wright State University *SUSTAIN* project.
- 2000-02: Membership in the five-institution Miami Valley Regional Collaborative for the Improvement of Science and Mathematics Education through inquiry-based teaching.

*Project SUSTAIN* has afforded faculty opportunities to interact with peers from nearby institutions resulting in the Miami Valley Regional Collaborative project for 2000-02. More than 30 faculty from five institutions are working collaboratively on science and mathematics course and program enhancement, ongoing faculty professional development, and technology projects to develop methods of dissemination. These activities provide a continuing forum to discuss discipline-specific interests, resulting in substantive and meaningful improvements in teaching, learning, and teacher education at Central State University.

### ***Institution***

- 3,500 undergraduate students
- 131 faculty

Shawnee State University, created in 1986 from a former community college, offers 80 bachelor and associate degree programs across 2 colleges.

### ***Mathematics and Science Teacher Education***

- 1 mathematics education faculty
- 1 science education faculty

Baccalaureate programs produce about 5 mathematics teachers and 5 science teachers (grades 7-12) each year. The number of students in mathematics and science education has increased slightly over the past three to five years.

### ***Course Development and Revision***

- 3 new mathematics courses
- 5 mathematics courses revised to incorporate more inquiry
- 5 new courses in mathematics and/or science education
- 4 new science courses
- 6 science courses revised to incorporate more inquiry

Shawnee State has completed a full revision of teacher education programs and courses to meet new licensure requirements and has implemented a full teacher education conceptual framework for its new programs.

### ***Intra-Institutional Collaboration***

- Collaboration between Arts & Sciences and Education faculty in developing preservice courses for teachers and in conducting workshops for in-service teachers
- Campus-wide participation in NCATE review
- Physics faculty teach "Physics by Inquiry"

Education and Arts & Sciences faculty have worked together extensively to revise courses and programs in order to meet new licensure standards. Arts & Sciences faculty serve as instructors in *SUSTAIN* institutes.

### ***Inter-Institutional Collaboration***

- Portsmouth City Schools
- South Regional Professional Development Center

Shawnee State has a strong working partnership with the SRPDC in determining professional needs of South Region teachers, devising programs and institutes to meet those needs, and supporting teachers in these programs.

### ***Institutes and Workshops for K-12 Teachers***

- Annual Teacher Academy with 2-3 mathematics/science programs per year

National curriculum project materials and methods, most notably Cognitively Guided Instruction (CGI), Connected Mathematics Project (CMP), and Foundational Approaches in Science Teaching (FAST), are integrated into workshops for teachers.

### ***Professional Development for Higher Education Faculty***

Professional development of faculty has occurred in conjunction with *OSI-Discovery* and *Project SUSTAIN* institutes. Shawnee State professors have attended, as higher education participants, inquiry-based *Discovery* institutes for teachers and then conducted, as presenting faculty, *SUSTAIN*-funded programs sponsored for the South Region by Shawnee State University.

### ***SUSTAIN Focus at Shawnee State University***

- 1998-99: Collaboration of Arts & Sciences and Education faculties to deliver institutes to 80 Portsmouth City School teachers and preservice teachers. In-service and preservice teachers participate in institutes as a team, with the preservice teachers assigned to their in-service teammate for student teaching in the subsequent quarter.
- 1999-00: Shawnee State has developed seven new inquiry-based content courses for prospective mathematics and/or science teachers K-12 and has revised eleven other courses to incorporate more inquiry.

Shawnee State University has completed development of a core of inquiry-based courses for prospective teachers. They are continuing to refine that core through collaborations between Arts & Sciences and Education faculty working with area teachers and preservice students.

<b>Mathematics and Science Teacher Education</b>	<ul style="list-style-type: none"> <li>• 3 mathematics education faculty (1 in mathematics, 2 dual appointment mathematics/education)</li> <li>• 6 science education faculty (2 in science, 4 dual appointment science/education)</li> </ul> <p>Baccalaureate programs produce 10-15 mathematics teachers and about 20 science teachers (grades 7-12) each year. The number of students and faculty in mathematics and science education has remained fairly constant over the past five years.</p>
<b>Course Development and Revision</b>	<ul style="list-style-type: none"> <li>• 13 education courses developed/revised to meet new licensure requirements</li> <li>• 24 new credit hours in each content area for middle grades licensure</li> <li>• 8 mathematics courses revised to incorporate more inquiry</li> <li>• 10 science courses revised to incorporate more inquiry</li> </ul> <p>A new middle grades methods course has been developed, as well as 2 new mathematics courses and 4 new science courses especially designed for middle grades teachers; all are small, inquiry-based courses. Course revisions include integration of science and mathematics, historical and social perspectives, applications and problem solving, authentic assessment, and pre/post knowledge/attitude measures.</p>
<b>Intra-Institutional Collaboration</b>	<ul style="list-style-type: none"> <li>• Dual appointments foster intradepartmental activities</li> <li>• Other arts &amp; sciences faculty actively participate in collaborative teacher education activities</li> </ul> <p>Many faculty members, in part due to dual appointments in a content area department and in education, are interested in educational issues. Evidence of this interest is shown in the number of faculty members who have participated in course revisions, <i>Discovery</i> institutes, licensure program development, master's degree program development, grant proposals, and in-service programs for teachers.</p>
<b>Inter-Institutional Collaboration</b>	<ul style="list-style-type: none"> <li>• University of Dayton</li> <li>• Central State University</li> <li>• Clark State Community College</li> <li>• Sinclair Community College</li> <li>• Edison State College</li> <li>• WSU, Lake Campus</li> </ul> <p>Collaboration with these institutions has included one-day chautauquas and inquiry classroom visitations for science, mathematics, and education faculty. These events have laid the groundwork for collaborative partnerships in Phase 3 of <i>SUSTAIN</i>.</p>
<b>Institutes and Workshops for K-12 Teachers</b>	<ul style="list-style-type: none"> <li>• 12 teacher institutes</li> <li>• 5 school districts</li> </ul> <p>Faculty have conducted at least a dozen professional development programs in the past five years, including summer institutes for K-12 teachers in five local districts (Dayton Public, Trotwood-Madison, Fairborn, Huber Heights, and Springfield). All of these programs have included an administrator workshop.</p>
<b>Professional Development for Higher Education Faculty</b>	<ul style="list-style-type: none"> <li>• 2 <i>SUSTAIN</i> institutes</li> <li>• 3 National Network for Educational Renewal institutes</li> </ul> <p>Two workshops sponsored by <i>SUSTAIN</i> have been conducted for area college and university faculty in mathematics and science working to improve preservice teacher education. Three workshops focusing on school renewal and the education of educators have benefited faculty from WSU and partner institutions.</p>
<b><i>SUSTAIN</i> Focus at Wright State University</b>	<ul style="list-style-type: none"> <li>• 1997-98: Faculty adopted inquiry model for institutional change; one administrative and five teacher institutes conducted with Dayton Public Schools.</li> <li>• 1998-99: Seven core teacher education courses for elementary majors revised; six new inquiry courses for middle childhood licensure developed.</li> <li>• 2000-02: Collaborating with regional community colleges and universities (Central State University, University of Dayton, Sinclair Community College, Edison Community College) to revise teacher education courses, conduct ongoing professional development for college faculty, and develop a technology dissemination network according to commonly shared standards.</li> </ul> <p>Wright State University has taken a systemic approach to reforming elementary mathematics and science teacher education starting with its own institution and extending to the western Ohio region.</p>

### **Institution**

- 11,700 undergraduate students
- 380 faculty
- 1,150 graduate students

Youngstown State University, founded in 1908, offers more than 110 bachelor and associate degree programs across 7 colleges and schools. The master's degree is offered in 24 programs, and there is a doctoral program in educational leadership.

### **Mathematics and Science Teacher Education**

- 7 part-time mathematics education faculty
- 8 part-time science education faculty

Baccalaureate programs produce about 12 mathematics teachers and 20 science teachers (grades 7-12) each year. The number of mathematics teachers has been fairly constant over the past ten years, varying from about 10 to 15. The number of science teachers has been steadily increasing to its present number.

### **Course Development and Revision**

- Physics and astronomy introductory courses have been revised; mathematics and science education courses have included inquiry activities since 1996, reflecting YSU involvement with *Project Discovery*.
- Four new courses developed for middle grades licensure, three in mathematics and one in science
- Strands for new science courses are being developed through NSF- and Eisenhower-sponsored projects drawing upon highly regarded and tested national programs such as Constructing Physics Understanding.

Youngstown State recently converted from a quarter system to a semester system. This conversion incorporated changes arising from a new general education model for all undergraduate programs.

### **Intra-Institutional Collaboration**

- Arts & Sciences and Education faculty participate in NSF grant projects and Eisenhower projects
- The NSF SMET grant project is developing inquiry-based laboratory courses involving faculty from two or more sciences in each course.

Informal collaborations between Arts & Sciences and Education have been extended and institutionalized through *SUSTAIN* and leadership of the deans of Education and Arts & Sciences. These efforts have led to a five-year Teacher Education Enhancement grant from the US Department of Education Title II program.

### **Inter-Institutional Collaboration**

- Annual stakeholders' meeting
- Spring meeting with business leaders

Youngstown State holds stakeholders' meetings among faculty, Youngstown and Warren City Schools, Trumbull and Mahoning County Educational Service Centers, and the Far East Region Professional Development Center to provide input on undergraduate education programs for mathematics, science, and language arts teachers. Representatives of the business community have lent support to reform efforts.

### **Institutes and Workshops for K-12 Teachers**

- 10 institutes for teachers (3 academic year *Discovery*-Cascade, 4 mathematics, and 3 physical science)
- 1 *Discovery* institute for principals, involving 55 administrators from the Youngstown City Schools

The director of student teaching has committed to placing participating institute teachers with in-service teacher partners to provide classroom experience ideally suited to use of inquiry-based methods. Institutes have occurred through *SUSTAIN* and a Title II Partnership grant.

### **Professional Development for Higher Education Faculty**

Youngstown State faculty have formed professional development and teaching support groups, such as the collaborative learning discussion group, and a network of teaching circles on alternative assessment, teaching with technology, and the scholarship of teaching and learning. A Scholarship of Teaching and Learning Symposium is planned for 2001. A Faculty-In-Residence program enables mathematics, science, and language arts faculty to work at least half-time during the academic year in partner schools.

### **SUSTAIN Focus at Youngstown State University**

- 1997-98: A five-week mathematics institute and a three-week science institute for middle school teachers, integrating content and inquiry pedagogy, team-taught by Arts & Sciences and Education faculty with a clinical *Discovery*-trained teacher.
- 1998-99: Two inquiry institutes, one in mathematics and one in science, offered to preservice and in-service teachers, paired for follow-up student teaching with in-service partners.

Youngstown State University uses input from regional K-12 faculty and administrators to assess needs, make recommendations, and devise implementation strategies for inquiry-rich licensure programs developed collaboratively by Arts & Sciences and Education faculty. The five-year Title II grant will enhance institutionalization of *SUSTAIN* objectives, including joint curricular planning, cross-appointment of faculty, and collaborative outreach to area schools.

Reproduction Release  
(Specific Document)

**I. DOCUMENT IDENTIFICATION:**

Title: Milestones 2000: Reform efforts in mathematics and science teacher education programs at SUSTAIN collaboratives in Ohio

Author(s): Sigrid Wagner, Steven P. Meiring, Kelly M. Costner

Corporate Source:

Publication Date: December 2000

**II. REPRODUCTION RELEASE:**

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, Resources in Education (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic media, and sold through the ERIC Document Reproduction Service (EDRS). Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following three options and sign in the indicated space following.

**XX** Check here for Level 1 release, permitting reproduction and dissemination in microfiche or other ERIC archival media (e.g. electronic) and paper copy.

Check here for Level 2A release, permitting reproduction and dissemination in microfiche and in electronic media for ERIC archival collection subscribers only.

Check here for Level 2B release, permitting reproduction and dissemination in ERIC archival collection microfiche only.

Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but no box is checked, documents will be processed at Level 1.

I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC

microfiche, or electronic media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries.
